HOW IT WORKS:

The store attendant simply inserts the Amano Cincinnati mag-stripe parking ticket into the encoder and presses down on the top. The store number is then encoded to give a predetermined discount at the parking facility, and the encoded ticket is automatically processed by the AGP-5200 Series Fee Computer, AGP-7800 Series Automatic Pay Stations, AGP-6000 Lagtime Reader, AGP-4300 and AGP-4400 Series ExpressParc.

A summary of discounts and store numbers recorded on the Fee Computer or Pay Station eliminates the need to physically count coupons and makes it easy to bill discounts back to each store participating in your validation program.

Sample Store Discount Summary

Report generated by AGP-5200 Series Fee Computer:

- 1 Time & date report
- 2 Name of validation account
- 3 Total dollar amount of validations by store
- 4 Store number
- 5 Total number of validations

Additional lists and reports can be generated with a PC-based facility management software system.

Optional stand makes it easier to encode data

Manufactured by Amano Cincinnati, Inc.'s Ohio factory, an ISO 9001:2000 registered facility.
